

Django Job Portal Project Task

Project Name: JobNest — A Simple Job Portal

Objective:

Build a Django-based job portal that supports two types of users: **Job Seekers** and **Recruiters**. The portal should allow recruiters to post jobs and job seekers to apply. Each user should have a profile page where they can manage their own data.

Requirements

1. User Authentication (Custom User Model)

- Implement a custom User model using AbstractUser.
- Add a user_type field (choices: "recruiter", "job_seeker").
- Implement registration/login/logout functionality for both user types.

2. Template Mastering

- Use base.html as a master template.
- Extend it for different pages like home, dashboard, etc.

3. Recruiter Features

- Only recruiters can:
 - Add new job posts (Job title, description, salary, location, deadline, etc.).
 - Edit/delete only their own posted jobs.
 - View applicants who applied to their jobs.

4. Job Seeker Features

- Only job seekers can:
 - Browse all available jobs.
 - Apply for jobs.
 - Edit/delete only their own applications.

5. Profile Page

- **Recruiter Profile Page:** View, update, delete their posted jobs.
- **Job Seeker Profile Page:** View, update, delete their job applications.

6. Password Management

- Implement "Change Password" functionality
