

Project Title:

Recipe Manager – A CRUD Web Application using Django

Develop a **Recipe Manager** web application using the Django web framework. The main objective of this project is to implement **CRUD (Create, Read, Update, Delete)** operations to manage a collection of recipes. This application will be a simple project **without any user authentication**.

Project Description:

You are required to create a simple recipe management system that stores and displays recipes. The application should allow users to:

- Add new recipes using a form
- View a list of all recipes
- See full recipe details on a separate page
- Edit an existing recipe
- Delete any recipe

Each recipe must include the following fields:

- **Title:** Name of the recipe
- **Description:** A short overview of the dish
- **Ingredients:** Text describing the ingredients
- **Instructions:** Steps to prepare the dish
- **Image:** A photo of the recipe (optional but supported)
